

Therefore, an attention mechanism is introduced to assign different attention weights to the input hidden layer state, so that it can pay more attention to useful information. The recently proposed, combined with attention mechanism is mainly applied in the fields of machine translation, power forecasting, text recognition, etc [[36], [37], [38]].

Specifically, even if an image has identical intrinsic factors, memorability can change with how observers pay attention to it (Mancas and Le Meur, 2013; Bylinskii et al., 2015). Although some studies show the contribution of cognitive factors to memorability, it is still unclear how it relates to diverse human cognitive abilities. Thus, the inclusion of the memorability task ...
