**Sodium-Ion Batteries:** This type of battery use Sodium(Na) as their charge carrier ion. **Lithium ion:** Lithium ion battery is a type of rechargeable battery which gets charged and discharged by lithium ion movement between positive electrode and negative electrode. It generally uses reversible reduction of lithium ions to store energy.

It has a depolarizing effect. In a cathodic reaction, manganese is changed from + 4 to + 3 states.  $Zn(NH_3)_4^{2+}$  is created when the ammonia molecules created at the cathode interact with  $Zn^{2+}$  ions coming from the anode. The interaction of  $NH_3$  molecules with  $Zn^{2+}$  reduces the amount of free  $Zn^{2+}$  and raises the voltage of the cell. The potential of a dry cell ...
