Most cell phone batteries contain internal protection features to prevent overcharging. Leaving it plugged in for extended periods can still cause it to overheat and shorten the life of the battery over time. To prolong the life of your battery, plug it in only when needed and only leave it on the charger until it reaches 100%.

Figure 4: Comparison of lead acid and Li-ion as starter battery. Lead acid maintains a strong lead in starter battery. Credit goes to good cold temperature performance, low cost, good safety record and ease of recycling. [1] Lead is toxic and environmentalists would like to replace the lead acid battery with an alternative chemistry. Europe ...

How long do cell phone batteries last? The typical lifespan of your cell phone battery is dependent on its use. If you are using your phone very frequently, that means you are also charging it more often. The more you charge your cell phone battery, the more worn out it gets over time. Typically, a phone battery lasts about 1-2 years, which can ...

Where to Recycle a Car Battery. Old car batteries leak lead acid batteries that have toxic chemicals in them which are bad for the earth. They can contaminate the ground with lead, acids, chemicals, and plastics that are non-biodegradable.. Not everybody does the right thing with used auto batteries, but if you are environmentally conscious then you should recycle it when it ...
