

# Where is the green light on the battery

Each light, whether it's red, green, or yellow, has a distinct meaning: Solid Red Light: The battery is in the process of charging. Solid Green Light: Charging is complete, and the battery is ready to use. Flashing Red Light: Indicates a delay in charging due to battery heat or that the battery temperature is out of the ideal range.

The green light on an Anker Power Bank represents different meanings depending on the charging mode, device connections, and battery level. It can indicate whether the power bank is in the charging mode, fully charged, actively charging a connected device, or even provide information about the remaining power in the power bank itself.

The red light should turn solid green as soon as possible. If the red Brita light does not turn green when you replace the filter, or if there are no lights on, something is wrong. Remove the old part and replace it with the new one. For the green light to function properly, replace the new filter. In most cases, this fixes the problem.

A blinking green light on the remote often indicates low battery power, and replacing the batteries can help fix the issue. Check the connectivity between the remote and the Roku Ultra device. You can try moving closer to the device or resetting the connection by pressing the reset button on the back of the remote.

If you get a green and yellow light for battery inspection, the main thing you would want to do is check the voltage of the battery. Fortunately, you don't even need to do this manually with a voltmeter anymore! Just open the Mobile Link app, and you'll see the battery voltage displayed at the bottom of the screen: ...
