following guidelines when wiring the unit: o The KPC capacitor bank is wired in parallel with the load. o Refer to NEC wiring practices for appropriate wire sizes for your application. o Power Wiring: Only use 75°C copper conductors unless the wire connector is marked for Al/Cu, then the use of aluminum wire is permitted.

Configuration of Capacitor bank. A delta-connected bank of capacitors is usually applied to voltage classes of 2400 volts or less. In a three-phase system, to supply the same reactive power, the star connection requires a capacitor with a capacitance three times higher than the delta connected capacitor. In addition, the capacitor with the star ...
